

Health Focus has updated the way that conditions are displayed to align with the HCC v28 model. Going forward, please use the HCC tab in the Patient Point of Care and not the Conditions tab. You will still see the legacy conditions tab in the PoC for now, but please ignore this tab and use the new HCC tab located next to the patient measure tab. This tab is aligned with the HCC v28 model.

The Batch Print function will now only print using the HCC v28 model, and what is printed on those forms will be the same data that shows in the HCC tab.

On the HCC tab you will see the following data points.

Status: Green = diagnosed for 2025. Red = needs to be diagnosed for 2025. Yellow = suspected diagnosis.

Comment: BCBS Information received from BCBS. HMG information received from Honest Health Files.

History: Last provider who billed the diagnosis.
